

In Case Of Battery Failure

GUUB INTELLIGENT LOCK
P152 Touch keypad
Private/Public function

The P152 GUUB INTELLIGENT LOCK comes with a USB "C" Port
This can be used to power the lock if the battery fails or needs replacing. This is standard 5v USB. So, any USB power adapter will work.

The battery housing is protected by a bracket on the outside of the locker.

To replace battery the lock needs to be removed by undoing the nut on the rear of the lock inside the locker. Remove lock. Slide battery housing up, Replace battery.

Reverse the above to reinstall lock.

In Case of GUUB INTELLIGENT LOCK code lost.

A Unique Master code is assigned to all locks based on the serial number near the USB Port. This Master code will allow IT/Administrators to override any codes in the lock, essentially resetting to take a new code.

You have been supplied a spreadsheet with these Master codes attached. **Obviously do not lose this spreadsheet**
